

## End Grain Sealer for Permanently Exposed Cut Timber Faces.

The following products are recommended to seal all permanently exposed cut timber faces (Eg: Curtain Wall Mullions, Door Jamb Ends, Dummy Mullions, Add-ons and Cill Details). These water based products will protect the timber from absorbing excess moisture.

### **ARSC3333**

This product is liquid based and is designed to penetrate into the end grain. We recommend that the product is applied by brush in order to keep swelling of the timber to a minimal. A drying time 24 hours is required before any further products can be applied to the ends of the bars.

### **ARXA0481 or AR188R**

Both these products are pastes, which are applied to the ends of the bar after the ARSC3333 has dried. The products need to be spread liberally onto the end grain using a spatula or similar flat bladed instrument. Either one of these products can be used.

For best results use ARSC3333 and (Either one of ARXA0481 or AR188R).

ARXA0481 or AR188R can be applied on there own to provide some moisture protection. However they will not perform to the same standard as a combination with ARSC3333.

**The products described above are available to buy from Senior Architectural Systems but are non-stock items. Therefore prior to ordering please enquire for current lead time and up to date costs.**

### **Prices:**
